

- This chart is a visual aid that details the progress Citrus County has made in its Energy Savings Project.
- The light grey area represents the energy consumption of a pre-project year (2012-2013). The numbers from a pre-project year are only for a reference point. They **do not** properly predict or reflect current energy data.
- The **Baseline** uses additional information such as current weather patterns and billing days per month to properly account for energy consumption if the Energy Savings Project had not been implemented.
- Compared with the pre-project year, Citrus County has saved **1,611,683 kWh** in the first nine months of Year 1 alone!
